Pleasanton, CA - 94588

SUMMARY:

- Highly skilled Data Engineer with 8+ years of extensive experience in data analysis, design, implementation, and support for OLTP, OLAP, and data warehousing solutions.
- Proficient in SQL Server, SSIS, SSRS, SSAS, Power BI, and Tableau, with a strong focus on building and optimizing ETL processes, complex data models, and business intelligence solutions.
- Adept at data transformation, visualization, and report generation to support critical business decisions. Expertise in creating robust CI/CD pipelines for Azure Data Factory, leveraging Snowflake for advanced data manipulation, and automating workflows using Python.
- Experienced in working within Agile environments and collaborating with cross-functional teams to drive the successful delivery of data-driven solutions.
- Proven track record of delivering high-quality reports, dashboards, and visualizations to empower business intelligence and analytics. Strong troubleshooting skills with a focus on improving data accuracy, efficiency, and overall system performance.

EDUCATION:

- ❖ **Bachelors in Electronics and Communication Engineering** from JNTU Hyderabad in **2014**
- ❖ **Masters in Information Assurance** from Wilmington University at Delaware in **2017**

TECHNICAL SKILLS:

Databases	Microsoft SQL Server, Oracle 9i/11g, MS Access, MySQL
ETL Tools	SSIS, Informatica, DTS
Reporting Tools	SSRS, Power BI, Tableau, Excel
Languages	T-SQL, PL/SQL, M-Scripting, Python, DAX
Cloud Platforms	Azure Data Factory, Snowflake, Azure SQL, Azure Synapse, Databricks
DevOps/CI-CD	Azure DevOps, Jenkins, Git, Bitbucket
Methodologies	Agile (Scrum, Kanban), Waterfall
Other Tools	Jira, MS Project, SQL Profiler, Toad

PROFESSIONAL EXPERIENCE:

Client: California State Teacher's Retirement System, Sacramento, CA

Feb 2025 to Present

Role: Data Engineer/ Business Intelligence Developer

Responsibilities:

- Collaborated with data analysts and business users to gather requirements and translate them into scalable cloud data solutions.
- Ensured data governance and security compliance by implementing role-based access control (RBAC), managed identities, and secure credential storage in Azure Key Vault.
- Designed and implemented end-to-end data pipelines using Azure Data Factory (ADF) to orchestrate data ingestion from multiple on-prem and cloud sources into Azure Data Lake and Azure Synapse.
- Created and managed Snowflake data warehouses with custom schemas, loading data via Snowpipe and optimizing performance through clustering and partitioning strategies.
- Built data ingestion and transformation pipelines integrating Azure SQL, Blob Storage, Synapse, and Snowflake using ADF and custom Python scripts.
- Created Python-based orchestration scripts to manage data loads, monitor pipeline performance, and trigger downstream workflows via Azure Functions and Event Grid.
- Implemented star/snowflake schema data models for analytics and reporting in Azure Synapse Analytics and Snowflake.
- Tuned performance for Azure SQL and Synapse SQL pools using indexing strategies, partitioning, and resource class optimization.
- Configured Azure DevOps pipelines (CI/CD) to deploy ADF pipelines, Synapse artifacts, and Python scripts across development, staging, and production environments.

Client: Blue Cross Blue Shield of Arizona, Phoenix, AZ

Mar 2021 to Present

Role: Data Engineer/ Business Intelligence Developer

Responsibilities:

- Worked in Agile methodology in order to discuss status of the project twice a week and take further measures which includes scrum meetings daily to discuss product backlog.
- Transformed the dimensional model of existing Cubes to Star schema architecture on SQL Server, increasing data accessibility for analysts and enabling the generation of insights from 1M+ data points with greater speed.
- Designed and optimized **complex SQL queries** and **stored procedures** to support and improve efficiency of data transformation s per reporting requirements.
- Created **Python** scripts to automate data processing tasks, including data validation, cleansing, and transformation, which reduced manual intervention by 20% and improved data accuracy.
- Developed custom Python modules to extend ADF capabilities, enabling advanced data manipulation and integration functionalities not natively supported by ADF.
- Implemented CI/CD pipelines for Azure Data Factory using Azure DevOps, streamlining the deployment of ADF pipelines.

- Built complex data ingestion workflows leveraging Azure Synapse to orchestrate data movement from multiple cloud sources such as Azure Data Lake and Blob Storage.
- Automated ETL workflows using Databricks Jobs and Triggers, scheduling tasks for consistent data refresh and transformation across cloud environments.
- Managed version control, automated testing, and deployment processes for ADF artifacts, ensuring consistent and reliable releases across development, staging, and production environments.
- Collaborated in the design of database schemas for MDM solutions, focusing on performance optimization and data normalization using SQL Server.
- Set up Snowflake to support real-time or near-real-time data access, enabling dynamic and up-to-date Power BI reports and dashboards.

Client: Alameda County ITD, Oakland, CA

Mar 2020 to Feb 2021

Role: Data Engineer/ Business Intelligence Developer

Responsibilities:

- Developed and maintained SQL scripts to implement matching algorithms and survivorship rules for accurate master data consolidation in MDM systems.
- Applied Python to optimize data loading and processing performance in Power BI, resulting in faster report generation and improved user experience.
- Configured and optimized Azure Blob Storage solutions for storing and retrieving large volumes of structured and unstructured data, enhancing data accessibility and storage efficiency.
- Automated ETL workflows using Azure Synapse Pipelines, integrating with other Azure services like Azure Data Factory and Azure Logic Apps to streamline data processing to improve efficiency by 20%.
- As a Power BI and Tableau SME responsible for the design, development and production support of interactive data visualizations used across the company.
- Created and maintained advanced Snowflake data models to support complex analytical queries and ensure data integrity for accurate Power BI reporting.
- Create branches from within JIRA and JIRA agile by integrating the Bitbucket with JIRA.

Client: American Century Investments, Kansas City, MO

Jan 2018 to Mar 2020

Role: Data Engineer/ Business Intelligence Developer

Responsibilities:

- Responsible for creating SQL data sets for Tableau recurring and Ad-hoc Reports.
- Created ad-hoc reports to users in Tableau Desktop by connecting various data sources, multiple views and associated reports.
- Created stored procedures and SQL queries to pull data into power pivot model, database creation, database tuning, SQL tuning, performance planning.
- Transformed complex business logic into Database design and maintaining it by using SQL objects like User Defined Functions, Views, T-SQL Scripting and Jobs.
- Performed Index analysis for tables and came up with more efficient solutions to use Clustered and Non-Clustered Indexes for significant performance boost using index tuning wizard.

Client: North Western Mutual, Milwaukee, WI

Apr 2017 to Dec 2017

Role: Business Intelligence Developer

Responsibilities:

- Coordinated with the front-end design team to provide them with the necessary stored procedures and packages and the necessary insight into the data.
- Implemented several DAX functions for various fact calculations for efficient data visualization in **Power BI**.
- Experience with SQL Server Reporting Services **SSRS** to author, manage, and deliver both paper-based and interactive Web-based reports with 10M datapoints.
- Provided an advance Tableau training to top stakeholders and team Members.
- Created several KPI's, perspectives, and calculated members that were eventually used for generating reports.

Client: HDFC Bank, Hyderabad, India

Jun 2014 – Jun 2015

Role: Business Intelligence Developer

Responsibilities:

- Designed, deployed, and maintained various **SSRS** Reports in SQL Server 2008.
- Created ETL metadata reports using **SSRS**, reports include like execution times for the SSIS packages, Failure reports with error description
- Design and develop SSIS packages, store procedures, configuration files, tables, views, and functions; implement best practices to maintain optimal performance by 30%
- Optimized the query performance with modification in T-SQL queries, removing unnecessary columns, eliminating redundant and inconsistent data.
- Performed tuning of databases by normalizing database, establishing necessary joins, creating useful clustered index and non-clustered indexes.
